

BIOMETRIC MONITORED ACCESS IN THE OFFICE

Summary – This paper contains both theory describing preliminary issues about biometry combined and own experience, with development issues of systems and showing the practical relevance how to create providing software for the Biometric monitored access practicable in the office. Of course on the commercial market competitive commercial solutions exist similar for planned by me. However a possibility of drawing the system up is the best thing of creating the own application relying on own experience considering needs of the key prospects. I often encounter the situation, when the customer is purchasing it ready solution e.g. delivered free of charge with the purchased reader.
